

Week-9

Aim: To Create a simple application using Ajax.

```
<html>

<head>

<script>

var request;

function sendInfo()

{

var v=document.vinform.t1.value;

var url="index.jsp?val="+v;

if(window.XMLHttpRequest){

request=new XMLHttpRequest();

}

else if(window.ActiveXObject){

request=new ActiveXObject("Microsoft.XMLHTTP");

}

try

{

request.onreadystatechange=getInfo;

request.open("GET",url,true);

request.send();

}

catch(e)

{

alert("Unable to connect to server");

}
```

```
}
```

```
function getInfo(){  
    if(request.readyState==4){  
        var val=request.responseText;  
        document.getElementById('amit').innerHTML=val;
```

```
    }
```

```
}
```

```
</script>
```

```
</head>
```

```
<body>
```

```
    <h1>Ajax</h1>
```

```
    <form name="vinform">
```

```
        <input type="text" name="t1">
```

```
        <input type="button" value="ShowTable" onClick="sendInfo()">
```

```
    </form>
```

```
    <span id="test"> </span>
```

```
</body>
```

```
</html>
```

Output:
